Abatement Technologies Expands Operations in 2022 and Beyond

Now in its 36th year of operations, Abatement Technologies highlights its growth in 2022 alongside future successes

FORT ERIE, Ontario – January 5, 2022 – [Abatement Technologies](https://www.abatement.ca), a manufacturer of specialized construction containment products designed to help protect those in and around construction in occupied spaces, highlights its strategic business objectives for 2022 and beyond. With a new branch location, an acquisition, two new product launches, and two significant customer success stories, Abatement Technologies has successfully proven its mission of being the “leaders in clean air.”

In April 2022, Abatement Technologies introduced the AIRE GUARDIAN® AG5000, the third addition to its AIRE GUARDIAN® series of mobile dust cart products that contains and filters any disturbed dust or harmful particles through a HEPA filtration unit, to the North American Market. Used in healthcare construction, abatement, and remediation, the AG5000 brought the industry the first collapsible hard-sided cart that is designed for easy transport and storage.

As Andrew Harber, CEO, Abatement Technologies, said, “Our team wanted to provide construction professionals with a flexible, easy to set-up and move mobile containment dustcart. The AG5000 is the ideal collapsible dust containment cart solution as it meets ICRA guideline requirements while also resolving difficulties in transportation and storage space. By comparison, a collapsed AG5000 can fit into the back of a flatbed truck for efficient transportation and boasts an easy on-site two-person assembly.”

Further adding to its AIRE GUARDIAN® series, Abatement Technologies made headlines once again in June 2022 for its launch of the AIRE GUARDIAN® SHIELD CORE — a robust reusable modular wall system designed for sound attenuation to reduce construction noise and add thermal insulation in critical environments. Constructed with a durable, attractive painted aluminum shell and a closed cell foam core, the modular wall system not only provides an amazing sound barrier, but is aesthetically pleasing and easy to install as well.

“As a leader in the design and manufacturing of powerful abatement products, it is important to continue to provide solutions that reliably remove or help protect from harmful particulates and

compounds. This containment system seamlessly blends into healthcare settings and provides enhanced sound attenuation and thermal insulation,” Harber said.

However, it wasn’t just new products that drove growth. In 2022, Abatement Technologies acquired Mississauga, Ontario-based QCSS 2000, a major sales, rental, and repair service provider of carpet cleaning, flood, and restoration equipment. This acquisition allowed Abatement to gain strategic access to the Greater Toronto Area and expand upon knowledge and experience in the restoration industry. Furthermore, the company opened a new location in Moncton, New Brunswick to better service customers on the east coast of Canada.

In recognition of its dedication to customer success, Abatement Technologies shared two success stories of providing necessary equipment to two major regional health authorities in 2022 - The [Northern Regional Health Authority](#) (NHR), and [Southern Health-Santé Sud](#) (SH-SS).

Brad Cudmore, Construction Officer at SH-SS, said, "Infection control has always been a top priority, and we really did an equipment-focused assessment when deciding what products we would purchase for indoor air quality and infection control purposes. We prioritized finding a vendor that offered reliable, full support alongside high quality products that were long lasting for everyday use."

In 2023, Abatement Technologies plans to announce its strategic partnership with a North America-based full-service provider of rentable temporary wall containment systems for commercial renovation and abatement. Leveraging Abatement Technologies for its AIRE GUARDIAN® SHIELD CORE, the partnership will position Abatement Technologies as the preferred vendor of modular containment wall systems across all of the company’s locations.
