## Abatement Technologies Shares Best Practices for Mould Containment and Remediation

*The new white paper explores proper procedures and key equipment for remediating mould growth while protecting indoor air quality*

**FORT ERIE, Ontario – Sept. 12, 2023** – [Abatement Technologies](#), a manufacturer of HEPA-based air filtration and construction containment equipment designed to help protect those in and around construction in critical and commercial spaces, has released a new white paper on best practices for controlling, containing, and remediating indoor mould growth. Titled, “[Mould & Indoor Air Quality](#),” the white paper also highlights key equipment for removing harmful mould spores and particulates from the air, including reusable containment barrier walls and HEPA filtration systems.

“Excessive moisture is a common problem in commercial and residential buildings alike. It could be from a leaking roof, a burst pipe, a flash flood, or even poor ventilation. And wherever there is excessive moisture, mould can begin growing in as little as 24 hours. By following the best practices outlined in our latest whitepaper, mould remediation contractors can respond in a way that’s fast, safe, and efficient,” said Brian Strawn, Director of Business Development, Abatement Technologies.

“mould & Indoor Air Quality” readers will learn the following:

- **Common causes of indoor mould growth:** How excessive moisture and standing water lead to mould growth in commercial buildings, homes, and other facilities
- **Harmful effects of exposure:** How mould causes health complications and damages building materials
- **Proper mould testing and remediation procedures:** Assessments, standards, and methodology for safely removing mould and affected materials
- **Key tools for the job:** Using reusable containment barrier walls and portable HEPA filtration systems to contain affected areas and remove harmful airborne particulates

Strawn continued, “Indoor air quality is one critical consideration during any mould remediation project. Remediation activities can release dangerous mould spores into the air, putting

contractors and anyone in adjacent areas at risk. At Abatement Technologies, we're proud to offer a full line of state-of-the-art containment and filtration solutions, plus support from our knowledgeable specialists, to help mould abatement contractors get the job done."

The full whitepaper is available for download here:
